Email: [charlesibitamuno@gmail.com](mailto:charlesibitamuno@gmail.com)

Country: United States of America

College/Company: Columbia University of General Studies

Specialization: Data Science: Retail Forecasting

## **Problem Description:**

The large beverage company in Australia needs to forecast demand for each of their products at the item level, on a weekly basis. Their sales are influenced by various factors including promotions, holidays, and seasonality. The company currently uses an in-house software solution for forecasting, but it often produces unreliable results. They want to explore AI/ML-based forecasting to replace their current system.
